#### Foreword from the Editors

This handbook investigates important legal issues that emerge from the highly topical discourse on climate protection. Experts from all over the world share their knowledge on "Climate Change Litigation", illuminating different legal perspectives: international law, European law, as well as national public and private law.

In addition, the present volume gives an overview of ongoing lawsuits and their relevant legal frameworks in different jurisdictions, including, inter alia, the United States, Canada, Australia, the UK, France, the Netherlands, Italy, Brazil, and Germany.

Climate change is one of the greatest societal challenges of our time. Its legal coverage is in the process of establishing itself as an independent branch of environmental and international law and will most likely become one of the major legal markets of the future.

Building upon this development, our handbook aims to pave the way for further legal research on climate change and upcoming legal proceedings in order to help protect our climate.
